PROJECTS

AI-Based Distress Detection and Emergency Communication System Through Voice Analytics | *Python, TensorFlow*

- Developed an AI-powered emergency detection system using speech emotion recognition.
- Extracted MFCC, Chroma, Mel Spectrogram and Zero Crossing Rate features from audio signals.
- Implemented CNN and Bidirectional LSTM models for multi-class emotion classification.
- Integrated a Gradio interface for real-time voice-based emotion prediction.
- Used the RAVDESS dataset for model training and evaluation.

Speech Emotion Recognition System | *Python, Machine Learning, Librosa*

2025

- Designed a speech emotion recognition model capable of identifying multiple human emotions.
- Performed preprocessing, feature extraction and model evaluation using Python libraries.

TECHNICAL SKILLS

Languages: Python, Java, C, SQL

Machine Learning: Scikit-learn, TensorFlow, Keras

Data Science: NumPy, Pandas, Matplotlib, Librosa

Developer Tools: Git, GitHub, Google Colab, VS Code, Jupyter Notebook

Database: MySQL

Core Subjects: Data Structures, DBMS, OOP, Operating Systems

CERTIFICATIONS

- **Python Essentials 1 & 2** – Cisco Networking Academy
- **Java (Basic)** – HackerRank
- **Complete Frontend Development** – Infosys Springboard
- **Data Analytics using Python** – NPTEL
- **Basics of Python** – Infosys Springboard

ACHIEVEMENTS

- Participated in AI Hackathons.
- Participated in SQL Hackathons.
